SUBJECT INDEX

α-acetyl-α,α-dimethylmethyl cations
destabilized carbenium ions: — 95
argon-cluster spectra
mass-resolved — up to 12 000 u (Ar_{300}^+) R11

$C_2H_2^{+\cdot}$
a neutralization–reionization study of — and H^+ 11
$C_3H^+ + H_2$ reaction
cyclic and linear isomers of $C_3H_2^+$ and $C_3H_3^+$: the — 307
$C_3H_2^+$ and $C_3H_3^+$
cyclic and linear isomers of —: the $C_3H^+ + H_2$ reaction 307
$C_6H_5NH_2^{+\cdot} \rightarrow C_5H_6^{+\cdot} + CNH$
direct measurement of the rate constant for the reaction — on the microsecond time scale 257

$D_3{}^{16}O$ and D_2F
the effect of ion excitation on the formation of metastable states of — in fast charge transfer reactions 299
destabilized carbenium ions
—: α-acetyl-α,α-dimethylmethyl cations 95
1,4-dioxane ions
photodissociation of —. Competitive formation of two fragment ions 1

electrochemical product characterizations
a Nier–Johnson secondary ion mass spectrometer for electrode surface study and — 277
electrode surface study
a Nier–Johnson secondary ion mass spectrometer for — and electrochemical product characterizations 277

fast atom bombardment
— as a convenient means to generate metal ion complexes in the gas phase R1
field ionization
thin wire emitter for — 55
FT-ICR spectra
apodization of — 287

glycerol matrix
collision cascade contributions in the sputtering of polyatomic ions from a — 239

H^+
a neutralization–reionization study of $C_2H_2^{+\cdot}$ and — 11

ion excitation
the effect of — on the formation of metastable states of $D_3{}^{16}O$ and D_2F in fast charge transfer reactions 299

mass analyzer
the ideal —: fact or fiction? 125
mass spectrometer detector system
a highly sensitive — 85
metal ion complexes
fast atom bombardment as a convenient means to generate — in the gas phase R1
methyl isopropyl ether
gas-phase dissociations of ionized —. A case for ion/neutral complexes? 117

nitroaromatic anions
dished peaks from collision-induced dissociations of — 41
nitrobenzene cation
infrared multiphoton dissociation of the — 47
nitrogen negative ions
— observed from NO and N_2 molecules 247
NO and N_2 molecules
nitrogen negative ions observed from — 247
noble gas chlorides
diatomic dications of — 319

polyatomic ions
collision cascade contributions in the sputtering of — from a glycerol matrix 239

rare gas atoms
state-selective electron capture by Xe^{q+} ions from — 263

$^{34}S/^{32}S$ ratios
in situ microanalysis for — using the ion microprobe SHRIMP 65
SHRIMP
in situ microanalysis for $^{34}S/^{32}S$ ratios using the ion microprobe — 65
state-selective electron capture
— by Xe^{q+} ions from rare gas atoms 263
thin wire emitter
— for field ionization 55

Xe^{q+} ions
state-selective electron capture by — from rare gas atoms 263
